

Get The Winning Edge

**Control Distortion
Improve Performance • Reduce Fatigue**

Blocks, Heads, Rods,
Pistons, Crankshafts,
Camshafts, Valves,
Valve Springs, Rotors,
Rings, etc....

Block treated on Black Magic Model 7125 15" x 30" platform with 150 lbs work piece capacity.

8-cylinder engine block being treated to control machine distortion and improve fatigue life.

Benefits

Control Distortion

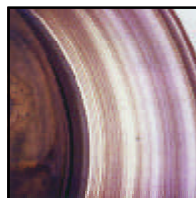

Improve Performance

Reduce Fatigue

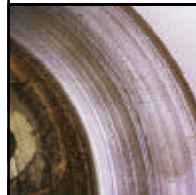

Multiple components being treated, reduces cracking, improving engine performance. Typical results include the following:

**Valve Springs - Double Life • Block - Triple Life
Crankshaft - Triple Life • Con Rods - Double Life**

Treated Rotor

Untreated Rotor

Side by side comparison of a treated rotor and an untreated rotor.

The rotors were both run in a 24-hour endurance race.

Note the cracks throughout the disc surface of the untreated rotor.
